## Meet with Purpose

Mars is a refined family of light, versatile chairs designed to move effortlessly between meeting, conference and café environments. Its considered construction balances strength with exceptional comfort.

Collaborative
Connections

Mars is a refined family of light, versatile chairs designed to move effortlessly between meeting, work, café, conference and training environments. Its considered construction balances strength with exceptional comfort, defined by generously proportioned, flexible polypropylene forms that bring seat, back and arms together in a clean, contemporary silhouette. Well suited to high-use conference and training spaces, Mars supports extended sitting while remaining easy to move, reconfigure and store, making it ideal for dynamic, multi-purpose environments.

Mars offers a choice of back options, including perforated moulded plastic, semi-upholstered or fully upholstered, allowing it to respond seamlessly to different applications, aesthetics and comfort requirements. With a wide range of bases, finishes and configurations available, Mars is designed to flex across environments without losing its identity.

## Projects

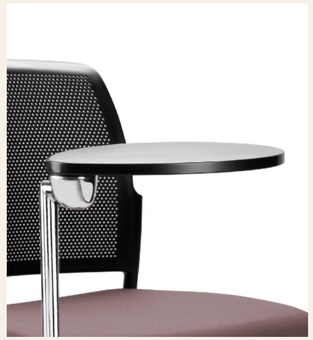

Mars is versatile ideal in today's workplace, designed for use across training rooms, conference spaces and agile working environments. Lightweight yet robust, it supports frequent reconfiguration and high levels of use while delivering everyday comfort. As a key component of the modern workplace, Mars enables spaces to adapt quickly, supporting collaboration, learning and focused discussion with ease.
