Uma

Meet with Purpose

Uma has an organic, contemporary form that exudes confidence, coupled with luxurious comfort to create a statement. Uma has presence and represents sustainable luxury.

Refined
Working

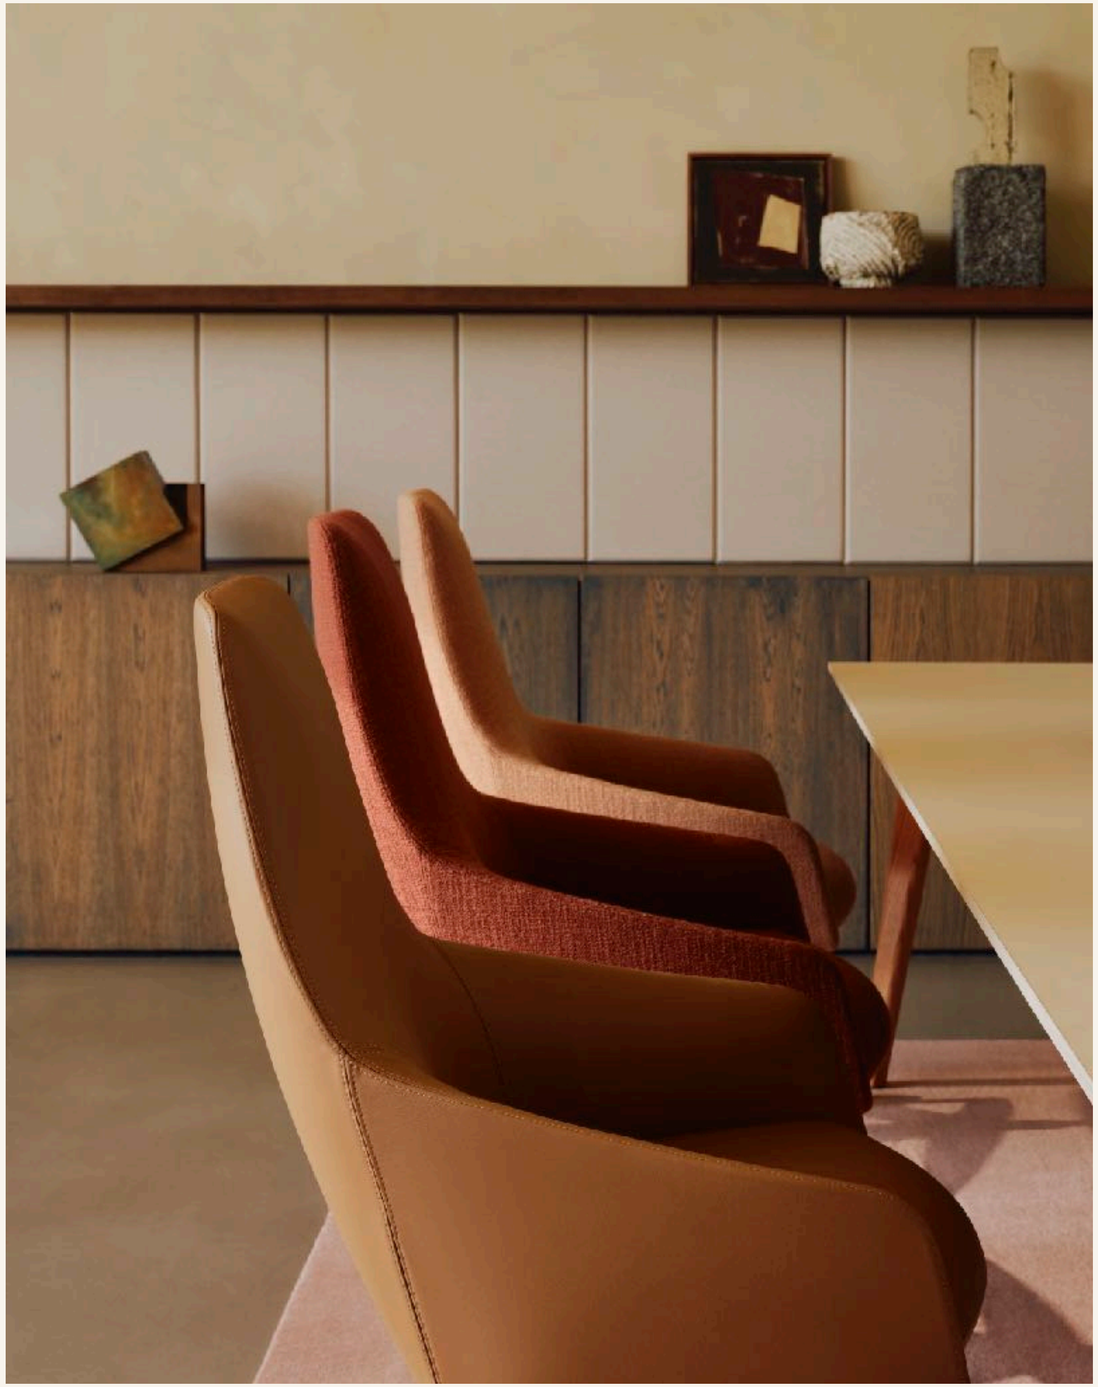

Uma has an organic, contemporary form that has quiet confidence and luxurious comfort. Drawing on years of sustainable material innovation, Uma offers a soft, sumptuous sit wrapped in an elegant, sculpted silhouette designed for enduring style.

Whether upholstered in patterned fabrics or a two-tone finish, Uma retains its strong presence while effortlessly integrating into informal meeting areas, breakout zones, and touchdown spaces. It harmonises seamlessly with the Boss portfolio, united by a shared design language.

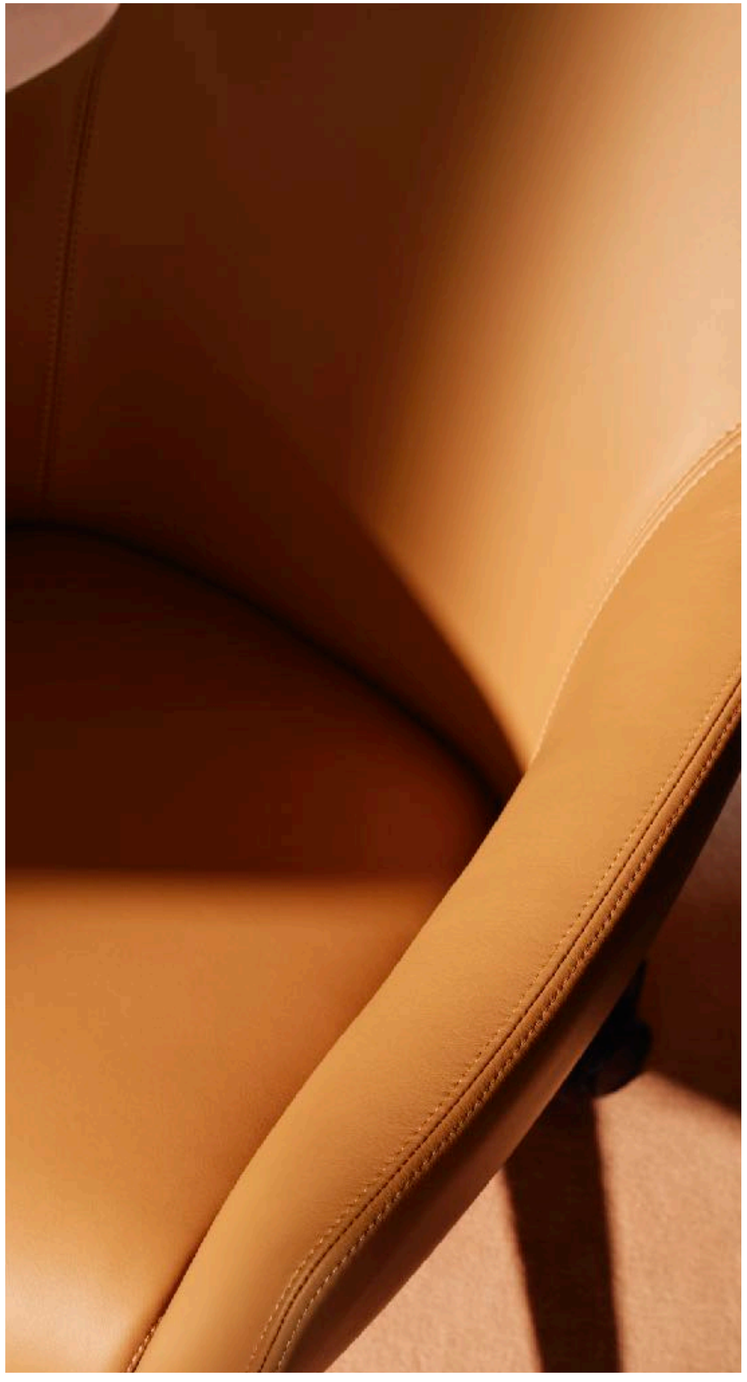

As a daily work chair or around a boardroom table, Uma delivers exceptional ergonomic comfort and support. It's available on a four or five-star aluminium base with tilt, adjustable height, and a lockable mechanism—bringing functionality and luxury to your space.

Uma has a versatile presence across the office landscape. Uma effortlessly shifts character, whether specified in rich monochromes for formality or expressive tones for creativity, it blends beautifully across boardrooms, lounges, or open-plan spaces. This capability, grounded in circular design principles, ensures Uma complements every function, every brand, and every vision for the modern workplace.

Uma with BioPur® Foam

BioPur® Foam is an innovative type of polyurethane foam that incorporates bio-based materials as a significant component of its formulation. This eco-friendly alternative to conventional foam is designed to offer similar, if not superior, performance characteristics while substantially reducing environmental impact.

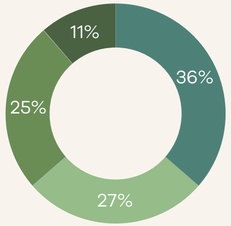

Reduced Carbon Footprint
BioPur® foam production reduces carbon emissions by up to 75% compared to traditional polyurethane foams, offering a substantial environmental benefit.

Renewable Resource-Based
The foam is derived using renewable biological sources, such as plant-based materials, which minimises dependency on petroleum-based products and supports the sustainable use of natural resources.

Durability and Performance
BioPur® foam does not compromise on performance. It exhibits high resilience, long-lasting durability, and excellent support properties, comparable to conventional foams.

Sustainable Manufacturing Processes
The production of BioPur® foam involves processes that consume less energy and produce fewer emissions compared to conventional foam manufacturing.

Clean Air
BioPur® foam is manufactured without the use of harmful chemicals, with low volatile organic compounds (VOCs) and trace formaldehyde, common in traditional foams, improving indoor air quality and overall health.

- 5.25KG Bio Pur Foam
- 8KG Steel
- 0.06KG Polyurethane
- 5.5KG Plywood
- 0.02KG Recycled Plastic
- 2.5KG Plywood
